

1. Create a table named books in database.(Insert some books from phpmyadmin)
  - a. Id
  - b. Name
  - c. Author
  - d. Edition
  - e. BookImage
2. AllBooks.php

Id	Name	Author	Edition	Image

Search box will have live search feature. If we search, suggest matched data. At the same time the below table should also be filtered. From the suggestion if we click any book it will take us to `book_detail.php?id=[dynamic id]`

3. Book\_detail.php
  - a. It will show the details of a book.

Hint: Use ajax to implement the scenario. Js to update the table based on search.
